FOREWORD

This handbook is intended as a reference to air defense organizations of the USAF, principally of the Air Defense Command and later the Aerospace Defense Command, from 1946 to 1980. Section I is a brief summary of the evolution of the air defense mission. Section II lists major changes in air defense organization from the formation of Air Defense Command in 1946 to the inactivation of Aerospace Defense Command 34 years and 10 days later. The remaining two sections provide lineage information on organizations from air forces through squadrons.

This handbook was first published by Lloyd H. Cornett, Jr., in February 1973. This printing was compiled by Mildred Johnson. Information to support each entry, plus coverage in detail of air defense in the USAF, can be found in the histories and archives of the Office of History, Aerospace Defense Center, Peterson AFB, CO, 80914.

SECTION I
AIR DEFENSE IN WORLD WAR I

At the outbreak of war in 1914 the problem of defense against air attack had been hardly considered. Aircraft performance was so limited that little more than reconnaissance flights over the lines could be undertaken. During the first three years of war the remarkable improvement in aircraft of both sides was not matched by a comparable improvement in the means for air defense.

On the Western Front air defense was not considered a special factor in the overall conduct of the air war. Few air tactics were developed specifically for air defense, combat air patrols generally doubling for both offensive and defensive purposes. However, large numbers of antiaircraft guns and searchlights were eventually emplaced behind the lines and a few captive barrage balloons were added for defense of specific targets. Then as now, the problem of early warning was of great importance. Ground observers at the front reported by telephone the approach of hostile aircraft and were assisted eventually by sound locating devices.

Effective air defense of ground forces on the Allied side of the lines was achieved by mid-1918 only through Allied air superiority.
The defense of the French capital was more successful. Paris was raided only twice by airships and 44 times by airplanes. About 500 German planes tried to reach Paris, but because they could be detected the moment they crossed the lines, and were subject to attack by pursuits and antiaircraft guns all the way to and from Paris, few succeeded in reaching their target.

The air defense of England provided an entirely different problem. When the German Zeppelin raids began in 1915, the British defenses proved completely inadequate. Only second-rate training aircraft and a few guns were available for defense, and the country had no organized warning system. Although the Zeppelins could approach undetected over the North Sea, they were compelled virtually to abandon their attacks by 1917 because of the greatly strengthened British fighter defenses. Fast pursuit aircraft firing incendiary bullets were found to be far more effective against Zeppelins than antiaircraft guns. The Germans then turned to large bombers to continue their air attacks on England. Their initial success compelled the British again to reorganize their defenses to meet the new threat. In 1918 an elaborate system of barrage zones was finally established in which searchlights, antiaircraft guns and warning posts were located in groups between London and the coast. Balloon aprons were also installed around London and the blackout
was extended to most English cities. Most effective defenders were the highly trained pursuit squadrons. The tightly co-
ordinated defense forced the Germans to abandon their raids in the summer of 1918.

The British success was in contrast to the German failure to stem the ever increasing raids on Germany by Allied air forces.

During World War I American experience in air defense remained essentially limited to defense against German raids directed at Allied ground forces. The air defense mission of 1918 could best be described in the same terms as today's ADC mission; only the tools have changed. For DETECTION and IDENTIFICATION the American Expeditionary Force used a system of ground observers and listening posts which operated with the antiaircraft artillery. German planes crossing the lines were reported by radio or telephone to the pursuit groups. For INTERCEPTION and DESTRUCTION the pursuit squadrons flew patrols echeloned in two flights of five airplanes each. Night interception proved difficult and pursuit planes usually depended on searchlights to disclose the exact position of the enemy planes.

By the fall of 1918 U. S. squadrons were clearing the skies over their sectors of the front and carrying the attack to German forces on the ground.
AIR DEFENSE BETWEEN THE WARS

In the interwar years the central factor in the history of air defense was America's relative invulnerability to air attack. Although bombardment aviation in theory and practice had made rapid strides since the last months of World War I, such progress boded ill mainly for the armies and cities of Europe. America's ocean frontiers seemed to be sufficient guarantees against attack, and further, no realistic threat existed on the international horizon until the rise of Japan and Nazi Germany in the mid-thirties.

Despite widespread conviction of the security of the continental United States, there was much discussion of air defense in the twenties and early thirties. Much of this discussion General Mitchell generated in his crusade for an autonomous and expanded air force. Not only were carrier-based raiders a distinct possibility, said Mitchell, but heavy bombers could attack the vital area of the North-east directly from Europe. Mitchell discounted any air defenses except those which could be provided by America's air forces, and he recommended that pursuit units be assigned to local defense of strategic points.

Mitchell's farsighted recommendations were often ignored, but still they represented the desire of many
airmen to expand the mission of the Army air arm, not only for defense, but for offense as well. The controversy centered around the responsibility for coastal defense of the United States, and continued for many years.

In 1935 the advocates of air power won an important victory. GHQ Air Force was created and development of both bombardment and pursuit aviation accelerated. In GHQ Air Force's first mission statement was included the requirement to "provide the necessary close-in air defense of the most vulnerable and important points in the United States."

The Army's two air defense weapons, pursuit aircraft and antiaircraft artillery, were severely handicapped by the absence of an early warning system. The only technical devices available for detection of aircraft were searchlights--helpful only at night--and sound locators which at their best were limited in range to approximately seven miles. However, by the mid-thirties, serious attention was being given the organization of an effective aircraft warning service. Tests were conducted during this period using civilians as ground observers, demonstrating that an aircraft warning net could provide invaluable aid to pursuit in the interception of modern bombers. But it was not until the introduction of radar in the early forties that an effective means was provided for aircraft detection.
With the necessity for provision of an early warning capability came the requirement for improvement in pursuit aircraft. During the early thirties the long lead time in pursuit development and production (coinciding with a major breakthrough in the design of the all-metal monoplane fighter) gave the bomber the opportunity to close temporarily the gap in performance. The high-performance Curtis P-36 and P-40 entered service in the late thirties—once more giving pursuit aircraft an edge over the bomber.

Thus, the ingredients for an effective air defense system existed by the outbreak of World War II, though not in sufficient quantity or effectively organized. Pursuit development had been intensified, an aircraft warning system had been demonstrated as feasible, and radar was in existence. It remained to: refine and train the Aircraft Warning Service, produce and deploy the radars, train pursuit pilots in the tactics of ground-air teamwork, and integrate fighters, antiaircraft, radar and AWS information centers into a smoothly functioning air defense system.

AIR DEFENSE IN WORLD WAR II

The introduction of radar made effective air defense possible. Experiments in radio-location were first conducted successfully at the Naval Research Laboratory in 1930. By December 1936 the Signal Corps successfully tracked
an aircraft to a distance of seven miles using short-pulse emission of radio waves. Air Corps representatives saw the value of the device for early warning. Service trials of the first early warning set, the SCR-270, were held late in 1939—the device being officially adopted in May 1940.

In spite of the outbreak of World War II in September 1939, the War Department did not put air defense on a crash basis. This was because military planners did not envisage a large-scale bomber assault on this country. Most airmen agreed with General George C. Marshall when he said in May 1940 that the defense of the country could be assured by denying a potential enemy bases in the Western Hemisphere.

Nevertheless, there were problems in air defense which had to be resolved. On General H. H. Arnold's (Chief of the Air Corps) recommendation, the War Department established, on 26 February 1940, an Air Defense Command, a unit composed of Air Corps, Coast Artillery and Signal Corps personnel. Activated at Mitchel Field under the command of Brigadier General James E. Chaney, an Air Corps officer, this pioneering organization studied the problems of effective integration of air defense weapons and procedures. In the little more than one year in which ADC existed, it was involved in an extraordinary range of activities including two extensive exercises. This
experience became invaluable to ADC in developing tactics and procedures, but even more significant was the experience of observing first hand the Battle of Britain during the fall of 1940. Although greatly impressed by British air defense organization, techniques, and equipment, General Chaney believed that the British integrated system was impracticable for the United States because of the great geographical areas involved. More realistic, in General Chaney's opinion, would be a number of self-sufficient and tailor-made air defense networks to service the needs of "strategic air areas."

At a conference held in February 1941, General Marshall assigned the responsibility for air defense to the air forces. To carry out its new task, GHQ Air Force was given four continental Air Forces, each of which contained an Interceptor Command. The Interceptor Commands were charged with air defense of their areas, but were subject to the overall supervision of four new Defense Commands, co-terminous with the four Army areas, which were vested with overall defense responsibility. With the training of the staffs of the new Interceptor Commands, the work of ADC was virtually completed. In June 1941 the command was inactivated, but its doctrines guided air defense operations for the remainder of the wartime era.
The entry of the United States in World War II resulted in a major expansion of air defense facilities, especially on the two ocean coasts. Ninety-five radar stations were eventually completed: 65 on the Pacific Coast and 30 on the Atlantic, although about 75 was the maximum number operational at any one time. The principal radars in use during the war were the SCR-270 (mobile) and the SCR-271 (fixed), with ground control intercept radar (SCR-588) being added during 1943 for close-in coverage (up to 50 miles) for tracking and controlling fighters from the ground.

The pioneer work of the first ADC in evoking a ground observer network in air defense exercises in 1940-1941 greatly facilitated the War Department's organization of the AAF Ground Observer Corps in 1942. The information net grew during the war to a maximum of 15 information centers along both coasts and four standby centers along the Gulf coast, with a total of 14,000 observation posts and an estimated 1,500,000 civilian volunteers enrolled.

The shortage of fighter planes in the early part of the war proved a serious handicap to the air defense effort, but the situation improved during 1942 with the receipt of the P-38 and P-47. Still, until the introduction of the P-61, the lack of all-weather aircraft made the success of interception at night, or in inclement weather, highly doubtful.
Antiaircraft artillery provided for local defense. AAA underwent drastic changes during the war, with unified AAA commands emerging on both coasts after Pearl Harbor. After considerable controversy the control of AAA was placed under the AAF interceptor commands.

This elaborate air defense system fortunately never had to deal with a major air attack. Until the Battle of Midway in June 1942, air defenses remained on a high alert, but after the naval battle, only occasional alerts were called. As the threat decreased, the defenses gradually reduced. In April 1943 the coast defenses dropped to a low degree of alert. By mid-1944 the GOC dissolved, the radar net reduced in size, the filter centers closed and many fighter wings transferred or disbanded. By war's end on the east coast three control centers received reports from only nine radar stations. On the west coast three control centers and 22 radars were active. With demobilization in 1945 America's air defenses virtually ceased to exist.

AIR DEFENSE IN THE COLD WAR ERA

America's experience in the Second World War convinced the Air Force that air defense was here to stay. In March 1946 the Air Defense Command was activated at Mitchel Field, New York with the mission of "providing for the air defense
of the United States." At the end of World War II a number of factors operated to belittle the need for elaborate air defenses. The result was that the construction of a modern air defense system lagged. In 1948 the Cold War broke out and a more urgent note was struck in air defense. During 1948 radars were removed from storage and deployed. The deficiency in suitable aircraft was partly remedied by pooling ADC's meager resources with those of the Tactical Air Command. Over both commands was placed the new Continental Air Command (ConAC), with headquarters at Mitchel Field. Overall responsibility for air defense was vested in ConAC. ADC became a small staff of planners which was abolished in July 1950. During 1949 and early 1950, steady strides were made in air defense. In March 1949, Congress authorized the construction of a "permanent" radar system. The outbreak of the Korean conflict in June 1950 underlined the need for increased air defense precautions. Building of the permanent radar network accelerated and ADC reactivated as a major air command in January 1951 and was reinvested with the air defense mission.

The next few years witnessed enormous strides in both the quantity and quality of air defense. By 1953, joint U.S.-Canadian efforts had extended radar coverage along the Pinetree Line north of the common border, and plans were approved for the erection of an electronic fence across the
top of the continent. This barrier came into operational use in 1958 as ADC's Distant Early Warning (DEW) Line.

In addition to covering the northern approach routes, measures were taken to provide coverage far out to sea. There, Texas Towers, bristling with radar equipment and embedded in the ocean bed, came into existence. Overhead flew ADC's Airborne Early Warning and Control aircraft—RC-121s. During the fifties radar coverage spread northward and laterally, while domestically the gaps were filled by additional stations and the organization of a million American men and women into the Ground Observer Corps (GOC), which served the nation until it was disbanded in 1959.

The early fifties also saw the transformation of ADC's weapons force. Day jet fighters such as the F-80 and F-84 gave way to all-weather jets like the F-94, F-89, and the Korean-bred F-86 "Sabres." As the performance of radars and weapons improved, the reflexes of the men who operated them proved much too slow. By 1953, steps had been taken to develop an electronic command and control network known as the Semi-Automatic Ground Environment (SAGE) System. The first SAGE Direction Center opened at McGuire AFB, New Jersey on 1 July 1958. By the end of the decade the blockhouses of the SAGE System could be seen across the nation.

Weapons also underwent modernization. The F-89D was modified to accept Falcon guided missiles (F-89H) and Genie
atomic rockets (F-89J) as armament. The F-86D was modified (F-86L) to include data link, thereby permitting more precise control from the ground. The F-86L and F-89H became available in 1956, the F-89J in 1957. Even more advanced were the Century Series supersonic interceptors. First was the F-102A, which appeared in 1956. The F-104 came along in 1958. The F-101B and F-106A were first received by ADC during the first half of 1959. The ADC interceptor force was composed of the F-101, F-104, F-106, and the F-102. Alongside the manned interceptors was the BOMARC supersonic interceptor missile which first entered the ADC inventory in September 1959, operating at a number of sites along the eastern seaboard and northern border.

In 1954 it became apparent that all three services were forging ahead with contributions to air defense. Coordination of their efforts was accomplished by a new agency reporting directly to the Joint Chiefs of Staff and called the Continental Air Defense Command (CONAD). In 1957, admission of Canada to partnership in the joint effort resulted in the North American Air Defense Command (NORAD), in which ADC continued to be the major United States component.

The pace of defense continued to pick up as the command sought an effective defense against the Intercontinental Ballistic Missile (ICBM) and Submarine-launched Ballistic Missiles (SLBMs). Progress took many forms. Along the
Arctic Circle, a network of huge radars labeled the Ballistic Missile Early Warning System (BMEWS) was constructed. Additional radars came into being for the sole purpose of detecting, identifying, tracking, and sending back data on any SLBM. All man-made objects became numbers in the USAF SPACETRACK network operated by ADC's 14th Aerospace Force. As the space mission grew the command changed its name, effective 15 January 1968, to Aerospace Defense Command.

Emphasis went to systems for ballistic missile detection and warning and space surveillance, and the atmospheric detection and warning system, which had been in an almost continuous state of expansion and improvement since the 1950s, went into decline. BOMARC, for example, was dropped from the weapons inventory, and the F-101 and F-102 passed from the regular Air Force inventory into the National Guard. The offshore Texas Tower radar platforms were closed. To save funds and manpower, drastic cuts were made in long range radars, the number of interceptor squadrons, and in the organizational structure. By 1968 the DOD was making plans to phase down the current air defense system and transition to a new system which included an Airborne Warning and Control System (AWACS), Over-the-Horizon Backscatter (OTH-B) radar, and an improved F-106 interceptor aircraft.
The changing emphasis in the threat away from the manned bomber and to the ballistic missile brought reorganization and reduction in aerospace defense resources and personnel and almost continuous turmoil in the management structure. The headquarters of the Continental Air Defense Command (CONAD) and ADC were combined on 1 July 1973. Two years later to the day ADC became a specified command--Aerospace Defense Command--by direction of the JCS. Reductions and reorganizations continued into the last half of the decade, but while some consideration was given to closing down the major command headquarters altogether and redistributing field resources to other commands, such a move lacked support in the Air Staff. In early 1977 strong Congressional pressure to reduce management "overhead" and the personal conviction of the USAF Chief of Staff that substantial savings could be realized without a reduction in operational capability moved the final "reorganization" of ADCOM to center stage. Two years of planning followed, but by late 1979 the Air Force was ready to carry it through.

It was conducted in two phases. On 1 October ADCOM atmospheric defense resources (interceptors, warning radars, and associated bases and personnel) were transferred to Tactical Air Command. On the same date, electronic assets went to the Air Force Communications Service (AFCS).
Thereafter, those two commands had day-to-day responsibility for resource management. On 1 December missile warning and space surveillance assets went to Strategic Air Command. On the same date Aerospace Defense Center, a Direct Reporting Unit, was established from the remnants of ADCOM headquarters. ADCOM, as a specified command, continued as the United States component of NORAD, but the major air command was inactivated on 31 March 1980. Unit designation of the MAJCOM reverted to the control of the Department of the Air Force.
SECTION II
MAJOR CHANGES IN COMMAND DESIGNATION

1946
Constituted on 21 March 1946, the Air Defense Command was activated at Mitchel Field, NY, on 27 March 1946.

1948
Continental Air Command (ConAC), created on 1 December 1948, was given the mission of air defense. ADC remained an "operational" command, but all air defense units were assigned to ConAC.

1950
The Air Defense Command was discontinued on 1 July 1950.

1951
The Air Defense Command was reestablished as a major air command on 1 January 1951 at Mitchel AFB, NY; ADC moved to Ent AFB, CO, on 8 January 1951. ADC inherited 21 fighter squadrons from ConAC and 37 ANG fighter squadrons assigned an M-Day air defense mission. It was also assigned four Air Divisions (Defense).

1954
Continental Air Defense Command (CONAD) was activated at Ent AFB, CO, 1 September 1954, in which ADC was a major U.S. Air Force component.

1968
ADC was redesignated the Aerospace Defense Command (ADC) on 15 January 1968.

1973
ADC and CONAD were consolidated on 1 July 1973,
1975

A new JCS Unified Command Plan designated ADC as a specified command and changed its name to the Aerospace Defense Command (ADCOM) on 1 July 1975; CONAD had been disestablished on 30 June 1975.

1979

Resource management responsibility of ADCOM's units having atmospheric defense missions (interceptors and warning radars) was transferred to TAC and resource management of ADCOM's units having communications and electronics assets was transferred to AFCS on 1 October 1979. Responsibility of ADCOM units having missile warning and space surveillance missions was transferred to SAC on 1 December 1979.

HQ Aerospace Defense Center was activated at Colorado Springs, CO, on 1 December 1979.

1980

Aerospace Defense Command (ADCOM), a major air command, was inactivated at Colorado Springs, CO, on 31 March 1980. ADCOM (specified) command was retained as an Air Force component of NORAD. Unit designation of the major command reverted to the control of the Department of the Air Force.
A CHRONOLOGY OF CHANGES IN ADC ORGANIZATION

21 March 1946 - ADC organized at Mitchel Field, NY, with an interim mission "to organize and administer the integrated air defense system of the Continental US...exercise direct control of all active measures, and coordinate all passive means of air defense."

27 March - The AAF Air Defense Command activated at Mitchel Field, NY. It assumed control of the 414th Night Fighter Squadron, which was a purely paper organization, and the 425th Night Fighter Squadron, which was manned by one officer and two enlisted men. Two bases, Mitchel Field and Hamilton Field, California, also assigned to ADC.

10 June - The ADC mission expanded to the extent that ADC was required to coordinate within the US the means available from other services for air defense, such as Naval and Marine aircraft units temporarily shore-based.

21 May 1947 - The 505th AC&W Group--the first postwar aircraft control and warning organization--activated at McChord Fld, Wash.

17 December - USAF--established earlier on 18 September--granted ADC authority to use fighter and radar forces of SAC, TAC, and the ANG in an emergency. The ANG constituted the major source of air defense units.

21 April 1948 - Secretary of Defense James V. Forrestal assigned USAF the primary responsibility for the air defense of the US.

25 October - The 25th Air Division--first air division for defense--established with headquarters at Silver Lake (near Everett) Washington; 26th Air Division formed on 16 November, the first one on the east coast, at Roslyn, NY.

1 December - Continental Air Command (ConAC) created and given the mission of air defense. ADC left as an "operational" command but all air defense units assigned to ConAC. TAC also placed under ConAC to provide additional fighter strength for air defense. General Stratemeyer became ConAC commander, and General Saville assumed command of ADC.
AREAS OF RESPONSIBILITY FOR AIR DEFENSE

March 1946 - June 1946

ADC was constituted on 21 Mar 1946, and activated at Mitchel Field, N. Y., on 27 Mar 1946.

July 1946 - June 1948
*ADC was assigned to ConAC on 1 Dec 1948.

*ADC was discontinued on 1 Jul 1950.
March 1949 – The six ConAC air forces relieved of their air defense responsibilities which were given to the Eastern and Western Air Defense Liaison Groups.

September – Eastern and Western Air Defense Forces activated and on 21 October fighter aircraft were placed under their continuous operational control. They were assigned to ADC as follows: HQ and HQ Sq, EADF and HQ and HQ Sq, WADF, effective 1 Jan 1951; both were redesignated HQ EADF and WADF effective 1 Sep 1951.

December 1949 – 32nd and 28th Air Divisions activated at Stewart AFB, NY and Hamilton AFB, Calif, respectively.

December 1949 – 30th Air Division activated at Selfridge AFB, Michigan.

1950

July 1950 – ADC (under ConAC) discontinued. The air defense mission remained with ConAC.

August – Command of the air defense forces west of 103° Meridian assigned to Western Air Defense Force.

September – Command of the air defense forces east of the 103° Meridian assigned to the Eastern Air Defense Force.

September – 27th Air Division activated at Norton AFB, Calif. Had been constituted 7 Sep 1950.

October – 31st Air Div activated at Fort Snelling, Minnesota.

1951

January 1951 – ADC reconstituted and ADC GO 2 established the Command which moved from Mitchel Fld to Ent AFB, Colorado Springs, Colo, under the command of Lt Gen Ennis C. Whitehead. ADC inherited a regular fighter force of 21 fighter squadrons from ConAC, and 37 ANG fighter squadrons assigned an M-Day air defense mission. It was also assigned the 25th, 26th, 27th, and 28th Air Divisions (Defense).

January – Albuquerque Air Defense Area, Provisional assigned.
*ADC was reestablished as a major command at Mitchel Fld, NY on 1 Jan 51; the headquarters moved from Mitchel Fld to Ent AFB, Colo. on 8 Jan 1951.
AREAS OF RESPONSIBILITY FOR AIR DEFENSE

February 1952

EADF

WADF

CADF

February 1953

EADF

WADF

CADF
5 January 1951 - 34th Air Division (Def) activated at Kirtland AFB, New Mexico, and assumed the responsibilities formerly held by Albuquerque Air Defense Area, Provisional, now discontinued.

1 March - Central Air Defense Force activated at Kansas City, Mo. Activated as HQ and HQ Sq, CADF. Renamed HQ CADF effective 1 Sep 1951. Moved to Kansas City, Mo to Grandview AFB, Mo, 10 Mar 1954. Grandview was redesignated Richards-Gebaur AFB, Mo, effective 27 Apr 1957.

1 March - 29th Air Div (Def) activated at Great Falls AFB, Montana.

19 March - 33rd Air Div (Def) activated at Tinker AFB, Oklahoma.

7 June - 4750th Air Base Sq (Gunnery Training), the first ADC gunnery training unit, activated at Yuma County Airport, Yuma, Arizona.

1 July 1951 - 35th Air Div (Def) activated at Kansas City, Mo. and the following September moved from Kansas City to Dobbins AFB, Ga.

15-16 September - 25th Air Div (Def) headquarters moved from Silver Lake, Wash. to McChord AFB, Wash.

1952

8 February 1952 - A reorganization of ADC ended the wing-base plan and created defense wings.

15 February - 32nd Air Div (Def) headquarters moved from Stewart AFB NY to Hancock Fld, NY.

1953

16 February 1953 - ADC reorganized and defense wings assigned to air divisions.

16 February - 34th Air Div (Def) transferred from Western Air Defense Force to Central Air Defense Force.

1 September - training unit at Yuma County Airport, Yuma, Ariz. was raised to Wing status, becoming the 4750th Training Wing (Air Defense).
Areas of Responsibility for Air Defense

June 1955

March 1956
1 October 1953 - the 4701st AEW&C Squadron—the first airborne early warning and control unit—activated at McClellan AFB, Calif.

1954

1 May 1954 - The 8th Air Division activated at McClellan AFB Calif. to supervise the buildup of the AEW&C force.

1 September - Continental Air Defense Command (CONAD) activated at Ent AFB, Colo. The same date, NAVFORCONAD (Naval Forces CONAD), established at Ent.

8 October - 9th Air Div (Def) activated with headquarters at Geiger Fld, Wash.

1955

1 May 1955 - 8th Air Division reassigned from WADF to HQ ADC.

8 July - the 552nd AEW&C Wing activated at McClellan AFB, Calif.

8 September - the 37th, 58th, and 85th Air Divisions activated at Truax Fld, Wright-Patterson AFB, and Andrews AFB, respectively.
